

RESOLUTE SOLUTIONS FABRIC GUIDE

SOLUTIONS FABRIC fixtures utilize *XOREL* from Carnegie Fabrics.

XOREL is a woven polyethylene textile.

Technologically advanced and environmentally sustainable, Xorel requires low energy to manufacture and has no chlorine content, plasticizers or heavy metals. Nothing is added to the woven Xorel product to enhance performance. All its properties: durability, cleanability and colorfastness are inherent to the yarn itself. Most stains can be removed simply with a cloth dipped in hot water. Xorel's anti-bacterial, anti-fungal and anti-staph nature and its ability to prevent bacterial strikethrough make it an ideal shade material for hospitals, hotels and other public applications.

QUICK SHIP FABRIC KEY

These fabrics are kept in stock, typical product production time is about one week.

COM FABRIC

COM Xorel fabrics are readily accommodated. There is a set-up charge of \$235 (NET) on COM orders of less than 10 fixtures. There is no set-up charge above 10 fixtures. Fabric required per shade is listed below. These figures are expressed in linear yards (LY) -- that is yards of full width material. Because of how parts are laid out on the fabric and full yard ordering increments, minimum yardage figures are also given on shades with parts longer than 36".

All yardage requirements must be confirmed with Resolute at the time of order but the figures below will be very close. On orders with mixed sizes there may be opportunities to conserve material used.

All scrap fabric is returned to Carnegie for repurposing.

RESOLUTE SOLUTIONS FABRIC GUIDE

COM fabric requirements by shade:

SMITH 5	.07 LY / shade	
SMITH 10-9	.22 LY / shade	
SMITH 10-14	.36 LY / shade	
SMITH 10-23	.54 LY / shade	
SMITH 16-9	.32 LY / shade	
SMITH 16-14	.53 LY / shade	
SMITH 21-9	.4 LY / shade	
SMITH 21-14	.67 LY / shade	
SMITH 28	.9 LY / shade	
PROSPERITY 12	.28 LY / shade	2 LY minimum
PROSPERITY 16	.5 LY / shade	2 LY minimum
PROSPERITY 22	.5 LY / shade	2 LY minimum
PROSPERITY 36	1.1 LY / shade	2 LY minimum
PROSPERITY 20	.55 LY / shade	2 LY minimum
PROSPERITY 30	1.1 LY / shade	2 LY minimum
PROSPERITY D1	.09 LY / shade	
PROSPERITY D2	.12 LY / shade	
PROSPERITY D3	.19 LY / shade	

Fabric must be ordered in full yard increments.

RESOLUTE SOLUTIONS FABRIC GUIDE

LUMINANCE

We have tested fabric swatches for luminance utilizing a black box with a 26W CFL source shining through a window screened with the fabric swatches. Light transmission is measured by a light meter suspended in a second black chamber. The purpose of these tests is to give a sense of the relative luminance of various fabrics. The actual LUX readings are given as an index. This INDEX establishes the most luminous fabric as “1” and expresses the other results as a percentage of that. Use these figures as relative values to get a feeling for the decorative light component of the fixture’s output.

Through careful design and development of internal reflectors and the diffusion disk on the Prosperity pendants we have been able to get approximately 112% usable downward light output. This means, these fixtures produce more downward light than an exposed lamp in the same shade in spite of being diffused. Prosperity wall fixtures are very sensitive to their covering fabric. Soft frosted end enclosures allow 90% light transmission.

SUITABILITY

In addition to the technical tests, fabrics have also been subjectively evaluated by our design team for illumination. These subjective evaluations are unrelated to the luminance of the fabric. We have separated the fabrics into broad categories: BEST, GOOD and FAIR. If a fabric is not on the list it has been judged as not suitable for use as a shade.

Please note that the CARNEGIE fabric samples you probably already have in your resource library are presented as wall coverings or upholstery. Fabrics look radically different when backlit. This is the reason we have subjectively evaluated the styles.
